Writing a Quality Research Paper.

The writing of a manuscript starts with a solid research proposal and research plan.

This seminar will show the steps required to produce a quality research paper. This seminar will cover all the steps including:

1. manuscript writing,
2. auto-revision,
3. publication journal selection criteria (i.e., impact factor, audience type),
4. the peer-review process, dealing with reviews and rebuttals, and the editorial/galley production process.

The manuscript writing process involves tips to produce coherent descriptions and discussions, appropriate results presentation (i.e., avoiding redundancy), creation of solid abstracts and conclusions, and appropriate and complete literature references.

The speaker thanks Dr. Ubaldo Córdova from the UPRM Chemical Engineering Department for encouraging the development of this seminar.
